

Skin Cancer Foundation Recommends 3M Window Film

The facts can be frightening: 1.3 million Americans are diagnosed with skin cancer each year; one in five Americans and one in three Caucasians will develop skin cancer in their lifetime; more than 90 percent of skin cancers are caused by sun exposure, yet fewer than 33 percent of adults, adolescents, and children routinely use sun protection. The Skin

Cancer Foundation seeks to raise awareness about the dangers of the sun, and the simple things one can do to help prevent skin cancer.

Many prevention techniques are obvious, such as using sunscreen with a high SPF, avoiding the sun during peak times and covering up. But the power of harmful UV rays can reach you even in the shade or through the glass of your home. Therefore, among the recommendations of The Skin Cancer Foundation is the use of 3M Window Film on your home's windows.
